

Transiberia — EU AI Act Risk Assessment

Addendum to Engagement Brief · Scope: proposed AI systems in the Automated Infrastructure & Proactive Exception Tracking programme

Overall verdict: Minimal to Limited Risk — no high-risk AI in scope. None of the proposed systems fall under the EU AI Act's high-risk category (Annex III). Compliance obligations are straightforward and can be addressed within Phase 0.

1. AI SYSTEM INVENTORY & RISK CLASSIFICATION

AI System	What it does	Data used	Risk Tier	Obligation
GenAI Layer (WhatsApp + docs)	Reads carrier WhatsApp messages and PDFs; extracts structured data; classifies exceptions.	Carrier names, contact details, shipment data, delivery timestamps.	MINIMAL RISK	Human reviews output before any action is taken. GDPR data retention policy required.
Cloud TMS Matching Logic	Suggests or ranks carriers for a load based on availability, cost, and performance history.	Carrier performance scores, historical rates, lane data.	MINIMAL RISK	Dispatcher confirms every assignment. No automated award without human sign-off.
WhatsApp Automation Bot	Sends automated booking confirmations, delay alerts, and POD requests to carriers.	Carrier contact data, shipment status.	LIMITED RISK	Carriers must be told they are interacting with an automated system. Add to onboarding docs.
Predictive Exception Detection (Phase 2, future)	Flags loads likely to be delayed before the delay occurs, based on historical patterns.	Route data, carrier history, weather signals, traffic patterns.	MINIMAL RISK	Output is advisory. Human dispatcher decides the response. No automated intervention.

Why no high-risk classification? EU AI Act Annex III defines high-risk as AI making decisions affecting critical infrastructure, employment, credit, law enforcement, or essential services. Transiberia's AI assists internal logistics operations — it does not affect people's rights or access to services. **Review required if** Transiberia later adds carrier credit scoring, automated driver performance evaluation, or any AI affecting individual employment decisions.

2. THE SIX COMPONENTS OF THE ASSESSMENT

1. AI System Inventory A register of every AI system in use or planned — what it does, who built it, what data it uses, what decisions it influences. Updated whenever a system is introduced or changed.	2. Risk Classification Each system classified against the four EU AI Act tiers, with documented reasoning referencing the specific Act annex. Borderline cases require written justification.
3. Transparency Obligations For the WhatsApp bot (Limited Risk): carriers must be informed they are communicating with an automated AI system. A short disclosure is added to carrier onboarding documentation.	4. Human Oversight Design Every AI output in this proposal is advisory. A dispatcher confirms before action is taken. This must be designed into the workflow and documented — not assumed.
5. Data Governance WhatsApp messages and PDFs may contain personal data (driver names, contacts). GDPR applies: data retention limits, purpose limitation, and access controls documented alongside AI Act compliance.	6. Ongoing Monitoring Quarterly review of AI system accuracy and unintended outputs. Results logged. Assessment revisited whenever a new AI capability is added to the system.

3. RECOMMENDATION & COST

Include in Phase 0

Add the EU AI Act readiness assessment to Phase 0 scope. It runs in parallel with the SAP and process audit — no additional elapsed time. Deliverable: a compliance register covering all six components, ready before the build starts.

Cost: €8,000 – €12,000 (addition to Phase 0 fixed fee)

Timeline: 3–4 weeks, parallel with Phase 0

Enterprise shippers — the clients Transiberia wants to grow into — increasingly ask logistics partners about AI governance. A completed assessment removes a commercial blocker before the first enterprise RFP arrives, not just a compliance one.

What IS required

- ✓ Carrier disclosure on WhatsApp bot
- ✓ Human-in-the-loop for all AI outputs
- ✓ GDPR data retention documentation
- ✓ Quarterly AI monitoring log
- ✓ AI inventory updated on system change

What is NOT required

- ✗ Conformity assessment / notified body
- ✗ Algorithmic bias audit
- ✗ EU AI Act database registration
- ✗ Technical documentation per Annex IV
